

The programs ("listvoice", "tts", "txt2wav", "txt2mp3", and "lame") are console programs.

1. listvoice - list voices installed on your Windows
2. tts - Text-to-speaker
3. txt2wav - Text-to-wave\_file
4. txt2mp3 - Text-to-mp3\_file (txt2wav and then lame)

*LAME is a free software codec used to encode/compress audio into the lossy MP3 file format.*

*NeoSpeech is a speech technology and speech software applications corporation for mobile, enterprise, entertainment and education markets. Stephen Hawking is a well-known Neospeech TTS user. Adobe Systems has selected Neospeech Speech synthesis for their e-learning authoring suite.*
